FAX: 803-684-1180

Pursuant to the new government regulations concerning products which children may come in contact with, SELA has assembled information which I think will fulfill these requirements for the products which we supply to your company. Please know that SELA has always strived to use only the highest grade materials for the products which we produce. All materials which we use are produced in North America, and to my knowledge contain no heavy metals, ingredients of Asian origin, or any other banned materials per our suppliers statements.

All of our straws and tips are made of PP, LDPE or LDPE/EVA and are therefore free of Phthalates which are typically found in PVC based materials to soften the plastic. I have specifically requested two labs to test SELA straws and tips for phthalates and they both replied they are unable to test for something which does not exist in a product.

The attached information includes letters from SELA suppliers stating their products are in compliance, a Xylene Extractables Analytical Report, a Hexane Extractables Analytical Report, property characteristic sheets and MSDS for materials which are commonly used in SELA straw and tip production.

All production and assembly of products manufactured or assembled by SELA is performed in South Carolina.

Thank you for your companies continued business relations and I hope the attached information resolves any questions concerning the materials utilized in the production of SELA products. Please do not hesitate to contact me if further information is needed.

Sincerely, Ronnie Roberts
