

Cuff Mold Block

Memory Section Mold Block

Corrugated Mold Block

Mold blocks are used in pairs in the corrugator. Each mold block is 2.25 inches in length.

Each memory section corrugated straw consists of a cuff block, a memory section block, and the appropriate number of corrugated blocks to make the desired straw length.

For example, an 11-inch memory section straw would use 3 corrugated block sets, in addition to the memory and cuff blocks.

The mold blocks are arranged in a continuous pattern in the corrugator to form a series of straws with the cuff section cut in half for a 1.125-inch cuff on each end of each straw.

Corrugated blocks are made in same manner except that a memory section is not included.
